1891.

MARSHALL McDONALD, Commissioner.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1893.

10.—ON THE CLASSIFICATION OF THE MYXOSPORIDIA, A GROUP OF PROTOZOAN PARASITES INFESTING FISHES.

BY R. R. GURLEY, M. D.,
Assistant, U. S. Fish Commission.

Up to the present time very little attention has been given to the diseases of fishes and to their parasites from the standpoint of the effect produced upon the host; yet there can be no doubt that a knowledge of such diseases would be of great practical value. Anyone who considers the proportions that fish epidemics sometimes attain will hardly be inclined to question the utility of searching investigation in this direction. Thus, to take a single instance, Prof. Forbes states* that in the epidemic of 1884 in Lake Mendota it was estimated that fully 300 tons had died. On August 7 the Madison Transcript reported that 200 tons of fish had been hauled away by the city authorities during the four weeks preceding and that the fishes were still dying. Epidemics of similar extent have been reported in Europe, for several of which (that of the barbel certainly, and that of the crayfish probably) the *Myxosporidia* are responsible.

The important results in the way of prevention of epidemics among domesticated animals and cultivated plants, obtained as the result of scientific investigation, afford ground for the hope that similar results may be obtained here. Obviously the first step in work of this kind is the collection of facts, especially those bearing upon the parasite, its nature, life history, intermediate hosts, enemies, and its connection (whether causal or otherwise) with diseases or other morbid processes in its host. Such data are a necessary preliminary to preventive or curative measures.

The present paper and a more extended one now in preparation are intended as contributions to the objects indicated. In the latter paper the practical bearings of the subject will be fully discussed, and all the data as to epidemics of myxosporidiosis will be given. At present it is desired mainly to discuss the classification of the subclass *Myxosporidia* Bütschli and to record such genera and species as a study of the literature and of such material as was available has led me to recognize. These forms will all be fully described and figured in the second paper. The present only includes such true *Myxosporidia* as have received or appear entitled to receive binomial names; and only such synonymy as is needed for their identification.

* Bull. U. S. Fish Com. 1888, VIII, p. 482.

CLASSIFICATION OF THE SUBCLASS.

The only classification ever proposed is that of Thélohan.* This author enunciates three taxonomic principles:

1. The habitat furnishes no sound basis for specific distinctions.†
2. The myxosporidium affords no taxonomic criteria.
3. The spores alone offer (at least in the present state of our knowledge) characters suitable to serve as a basis for classification. He says:

By noting the differences of form and size of these elements, the number of their polar capsules, by taking account of the presence or absence of a vacuole in the plasma, of their number in the [pan]sporoblasts‡, one can, I believe, succeed in obtaining elements sufficient for an attempt of this kind.

Thélohan further states that he regards the classification only as a provisional one, and that it is the result of a desire to obviate the great confusion arising from the habit of designating forms by their habitats.

The following is Thélohan's primary classification:

MYXOSPORIDIANS.

Spores.....	Pyriform; capsule 1, at pointed extremity; vacuole 1, aniodinophile, at large extremity.		I. <i>Glugeidians.</i>
	Form variable.....		
	No vacuole; capsules 2 or 4. Capsules 2..... Capsules 4..... Vacuole 1, iodinophile. Capsules 1-2.....		II. <i>Myxidians.</i> III. <i>Chloromyxans.</i> IV. <i>Myxobolans.</i>

The three principles mentioned, which form the basis of Thélohan's classification, are unquestionably sound as far as they go, but to obtain a satisfactory arrangement it will sometimes be necessary to employ additional characters and to arrange them in a different order of rank. Especially will it be necessary in the *Phænocystes* to refer constantly to the symmetry and topography of the spore.

Further, while there can be no question as to the propriety of drawing a sharp line between the "Glugeidians" of the above table and the remaining *Myxosporidia*,

*Bull. Soc. philomat. Paris, 1892, IV, pp. 165-178.

†While as a general principle this is beyond question, indications are not wanting to show that in some cases the seat and, to a somewhat less extent, the host, bear some relations to generic lines. One of the most significant facts of organal and zoölogical distribution is the following:

Forms.	Total number of species.	Gall and urinary bladders, bile ducts and urinary tubules.	Remaining organs.
Non-vacuolous.....	9	8	1
Vacuolous	Very many ...	<i>Ad plur 2 (3 ?)</i>	All but 2 (or 3).

‡ *Pansporoblast*: The transparent plasma-sphere formed by the condensation of a portion of the plasma around one of the numerous nuclei of the endoplasm of the myxosporidium; in distinction from the sporoblasts which result from the segmentation of the pansporoblast.

the division certainly can not rest upon such a comparatively unimportant character as the shape of the spore. I have regarded this division as of ordinal value and define the two orders thus:

I. *Cryptocystes* ord. nov. *Myxosporidia* in which the pansporoblast produces many (at the fewest 8) spores; the last minute, without distinct symmetry, with a single capsule; type (and only) family, *Glugeidae* fam. nov.

Etymology: *κρυπτός*, concealed; *κύστις*, capsule.

II. *Phænocystes* ord. nov. *Myxosporidia* in which the pansporoblast produces few (at the most 2) spores;* the last relatively large, with distinct symmetry and 2 or more capsules;† type family, *Myxobolidae* fam. nov.

Etymology: *φαίνω*, I appear; *κύστις*, capsule.

I. CRYPTOCYSTES ord. nov.

GLUGEIDÆ fam. nov.

Glugeidées Thélohan, 1892, Bull. Soc. philomat. Paris, IV, pp. 173-174.

Definition (provisional as regards negative characters): *Cryptocystes* destitute of a bivalve shell; with the capsule at the anterior extremity and with an aniodinophile vacuole; type genus, *Glugea* Thélohan.

This family contains three genera,‡ whose relations are shown in the following table:

Myxosporidium.	Spores formed in pansporoblast.	Pansporoblast membrane.	Genera.
Present.....	Inconstant, numerous.....	Not subpersistent.....	<i>Glugea</i> Thélohan.
Absent.....	Inconstant, numerous.....	Subpersistent.....	<i>Pleistophora</i> gen. nov.
Absent.....	Constant, 8.....	Subpersistent.....	<i>Thélohania</i> Henneguy.

GLUGEA Thélohan, 1891.

Compt. Rend. hebdom. Soc. Biol. Paris, III, p. 29; ib. Thélohan, 1892, Bull. Soc. philomat. Paris, IV, p. 174.

Definition: *Glugeidae* possessing a myxosporidium, and in which the pansporoblast produces an inconstant but large number (always more than 8) of spores; pansporoblast membrane not subpersistent; type, *G. microspora* Thél. (synonym for *G. anomala* Moniez).

Glugea anomala Moniez, 1887.

Nosema anomala, Compt. Rend. Acad. Sci. Paris, CIV, p. 1312; *Glugea microspora*, Thélohan, 1891, Compt. Rend. hebdom. Soc. Biol. Paris, III, p. 29.

Glugea destruens Thélohan, 1892.

Bull. Soc. philomat. Paris, IV, pp. 165, 174 (footnote).

* Three asserted in one species (Leydig, Müller's Archiv., 1851, p. 229).

† Except (at most) two *Myxobolus* species (one of them perhaps inconstantly), which have suffered reduction to one.

‡ Thélohan recognizes only 2 genera, the distinctions between which are mainly based upon the three characters noted. If (as both he and I believe) these characters are sufficient to determine genera at all, a third genus must be recognized, as *Pleistophora typicalis* sp. nov. could not (as the above table shows) well be forced into either of the existing ones.

PLEISTOPHORA * gen. nov.

Definition (provisional as regards negative characters): *Glugeidae* destitute of a myxosporidium and in which the pansporoblast produces an inconstant but large number (always more than 8) of spores; pansporoblast membrane subpersistent (as a polysporophorous vesicle); type (and only) species, *P. typicalis* sp. nov.

Pleistophora typicalis sp. nov.

(Corpuscles of *Cottus scorpio* Thélohan, 1890, Annal. de Microgr. Paris, II, pp. 203, 212; *ib.* Thélohan, 1891, Compt. Rend. hebdom. Soc. Biol. Paris, III, pp. 27-8; *ib.* Henneguy and Thélohan, 1892, Annal. de Microgr., IV, pp. 618-619, 622, 631, 636.)

Pansporoblast: Spherical, diameter 15 to 18 μ .

Spore: Ovoid; length 3 μ ; breadth 1.5 to 2.0 μ ; chromatophile granules *ad plur.* 4.

Habitat: Interior of fibrillæ of muscles of *Cottus scorpio*; diseased mass forming white streaks 5 to 6 by 3 mm.; not leading to muscle degeneration.

THÉLOHANIA Henneguy, 1892.

In Thélohan, Bull. Soc. philomat. Paris, IV, p. 174 (footnote); *ib.* Henneguy and Thélohan, 1892, Annal. de Microgr., IV, p. 639.

Definition (provisional as regards negative characters): *Glugeidae* destitute of a myxosporidium and in which the pansporoblast produces constantly 8 spores; pansporoblast membrane subpersistent (as an octosporophorous vesicle); type, *T. giardi* Henneguy.[†]

Thélohania contejeani Henneguy, 1892.

In Thélohan, Bull. Soc. philomat. Paris, IV, p. 174 (footnote).

Thélohania octospora Henneguy, 1892.

In Thélohan, Bull. Soc. philomat. Paris, IV, p. 174 (footnote).

Thélohania giardi Henneguy, 1892.

In Thélohan, Bull. Soc. philomat. Paris, IV, p. 174 (footnote).

Thélohania macrocystis sp. nov.

(Sarcosporidian of *Palæmonetes varians* Garbini, 1891, Atti Reale Accad. Lincei Roma, VII, Sem. 1, pp. 151-152, with figs.; myxosporidian of *ibid.* Thélohan and Henneguy, 1892, Compt. Rend. hebdom. Soc. Biol. Paris, IV, p. 586).

Sporophorous vesicle (subpersistent pansporoblast) elongate-fusiform.

Habitat: Muscles of *Palæmonetes varians* from the Mincio, near Verona.

II. PHÆNOCYSTES ord. nov.

It is in the classification of this order that the criteria furnished by Thélohan most need to be supplemented by considerations drawn from the *symmetry* of the spore. Considering the taxonomic importance of symmetry throughout the animal kingdom, it is strange that no attention has yet been paid to it in the *Myxosporidia*. But a little study of it shows that, whereas in all fusiform spores the pointed extremities have heretofore been loosely lumped together as "ends," those of *Myxidium lieberkühnii* Bütschli are not ends (*sens strict.*; = anterior and posterior), but sides; for the

* Etymology: $\pi\lambda\epsilon\sigma\tauος$, very many; $\phi\epsilon\rhoειν$, to carry.

[†]I propose *T. giardi* Henneguy as the type of the genus.

spore is symmetrical on either (right or left) side of the vertical plane,* but it is asymmetric on either (anterior and posterior) side of the transverse plane. On the other hand, if, as seems probable, the generic reference of *C.?* *diploxyd* sp. nov. be correct, then "ends" in *Cystodiscus* are ends, properly speaking. It is needless to emphasize the taxonomic import of these results, for we are thus enabled to orient the spore and the results of such orientation may be summed up as follows:

1. Within this order the most important characters are the *position* and *grouping* of the capsules. Compared to this the mere *number* of these bodies is a character of minor importance; for not only has *Myxobolus* 1 or 2 and *Cystodiscus* 2 or 4, but the number even varies in the same species, *Myxidium lieberkühnii* Bütschli having 2 or 4.† But whether 1 to 2 or 2 to 4, the topographic relations are never varied. Thus in *Myxobolus* they are always in one group at the anterior end; in *Cystodiscus* in two groups, *anterior* and *posterior*; and in *Myxidium* in 2 groups, *right* and *left*.

Similar results are obtained with relation to the position of the valves, or, in other words, to the orientation of their plane of junction.

The following table shows the relations of these points to generic lines:

Comparison of generic characters in the Phænocysts.

[\times = present; 0 = absent; () = less usual; — = condition not known.]

	Symmetry.		Capsules.				Shell.			Vacuole.	Tail.	
	Antero-posterior.	Bilateral; perfect.	Number.	In one group (at the anterior end.)	In two groups.		Bi-valve.	Inclination of plane of junction of valves to longitudinal plane.				
					At the (anterior and posterior) ends.	In the (right and left) wings.		0°.	90°.			
<i>Cystodiscus</i> Lutz.....	\times	\times	2 (or 4)	\times	\times	\times	—	0	
<i>Myxobolus</i> Bütschli <i>sens. strict.</i>	0	\times	2 (or 1)	\times	\times	\times	\times	0	
<i>Henneguya</i> Thélohan.....	0	\times	2	\times	\times	\times	\times	\times	
<i>Chloromyxum</i> Mingazzini.....	0	\times	4	\times	\times	—	(?)	0	0	
<i>Mixosoma</i> Thélohan.....	0	\times	2	\times	— ²	—	—	0	0	
<i>Sphaerospora</i> Thélohan.....	0	\times	2	\times	\times	—	—	0	0	
<i>Ceratomyxa</i> Thélohan.....	0	(¹)	2	\times	\times	\times	0	0	
<i>Myxidium</i> Bütschli	0	\times	2 (or 4)	\times	0	0	0	

¹ Imperfect. Shell and capsules symmetrical; sporoplasm unilateral.

² From analogy and general similarity of appearance, this genus can hardly be other than bivalve.

*The three planes to which symmetry may be referred may be thus defined:

Vertical plane: Median, longitudinal and intercapsular in position.

Transverse plane: Vertical, transverse and (in *Myxobolus*) postcapsular in position.

Longitudinal plane: Horizontal, longitudinal and percapsular in position.

† Balbiani, 1883, *Journ. de Microgr. Paris*, VII, p. 274, fig. 64 g.

From this table we may conclude that—

1. *Cystodiscus* Lutz is certainly entitled to separate family rank.

2. *Henneguya* Thélohan agrees with *Myxobolus* in every respect but one, the presence of a tail.

3. Thélohan's groups, "Myxidiées" and "Chloromyxées" must undergo rearrangement (see table below); for clearly *Chloromyxum* Mingaz, *Mixosoma* Thél., and *Sphaerospora* Thél. form a compact group, with which *Myxidium* has no character of consequence in common except the absence of a vacuole.

4. *Sphaerospora* and *Mixosoma* do not differ at all in the characters given (the distinction between these unispecific genera resting solely upon the shape of the spore), and the two taken together present only a single character in contrast to *Chloromyxum*, viz, the number of the capsules.

5. *Ceratomyxa* agrees sufficiently closely with *Chloromyxum* to permit its reference to the *Chloromyxidae*.

6. *Myxidium* must form the type of a separate family.

The following table shows the relations of Thélohan's classification to the one now proposed:

Thélohan's classification.			Proposed classification.		
	GROUP.		GENUS.	FAMILY.	CHARACTERS.
No vacuole, 2 or 4 capsules.	2 capsules. (II. Myxidians.)	Fusiform, 1 capsule at each extremity. <i>Myxidium</i> Bütschli.	<i>Myxidium</i> Bütschli.	<i>Myxidiidae</i>	Bilateral but not antero-posterior symmetry; capsules in 2 groups right and left; no bivalve shell; no vacuole.
	Spores.	Elongated; shell, formed of 2 hollow cone valves soldered along their bases. <i>Ceratomyxa</i> Thél. Flattened-ovoid, more or less elongate. <i>Mixosoma</i> Thél. Spherical. <i>Sphaerospora</i> Thél.	<i>Ceratomyxa</i> Thél ..		
	4 capsules. (III. Chloromyxans.)	<i>Chloromyxum</i> Mingaz.	<i>Chloromyxum</i> Mingaz, et sub-gen. <i>Sphaerospora</i> .	<i>Chloromyxidae</i> .	Bilateral but not antero-posterior symmetry; capsules in 1 group (at the anterior end); a bivalve shell, with the valve-junction plane perpendicular (?) to the longitudinal plane; no vacuole.
One iodinophile vacuole; 1 or 2 capsules.	IV. Myxobolans.	Destitute of a tail; capsules 1 or 2. <i>Myxobolus</i> Bütschli. With a tail; capsules 2. <i>Henneguya</i> Thél.	<i>Myxobolus</i> Bütschli.	<i>Myxobolidae</i>	Bilateral but not antero-posterior symmetry; capsules in 1 group (at the anterior end); a bivalve shell with the valve-junction plane parallel to the longitudinal plane, an iodinophile vacuole.
	Spore-shell.		<i>Cystodiscus</i> Lutz.	<i>Cystodiscidae</i> ..	Bilateral and antero-posterior symmetry; capsules in 2 groups, anterior and posterior; a bivalve shell with the valve-junction plane perpendicular to the longitudinal plane; condition of sporoplasm unknown.

As a result of this analysis, the order *Phænocyctes* may be divided into the following families:

CYSTODISCIDÆ fam. nov.

Definition: *Phænocyctes* whose spores possess antero-posterior and bilateral symmetry; capsules in 2 groups, situated at the (anterior and posterior) ends; a bivalve shell, the plane of junction of whose valves is perpendicular to the longitudinal plane: condition of sporoplasm* unknown; type (and only) genus *Cystodiscus* Lutz.

CYSTODISCUS Lutz, 1889.

Centralbl. f. Bakt. u. Parasitenkde., v, p. 88.

Definition: Characters those of the family; type, *C. immersus* Lutz.

Cystodiscus immersus Lutz, 1889.

Centralbl. f. Bakt. u. Parasitenkde., v, pp. 84–88; figs. separately and subsequently.

Cystodiscus ? diploxyx sp. nov.

(Psorosperms of *Pyralis viridana* Balbiani 1867, Journ. Anat. et Physiol. Paris, p. 335 (foot-note), t. 12, f. 10–12.)

Spore: Parallel-sided fusiform; ends symmetrically double convex-curved pointed; plane of junction of valves coincident with the vertical plane; capsules 2 at each end, of equal size.

Habitat: *Tortrix viridana*.

MYXOBOLIDÆ fam. nov.

(*Myxosporidieæ*† Perugia, 1891, Boll. Scientif. Pavia, XIII, p. 23; "Myxobolées" Thélohan, 1892, Bull. Soc. philomat. Paris, IV, pp. 173, 176.)

Definition: *Phænocyctes* whose spores are destitute of antero-posterior, but possess bilateral, symmetry;‡ capsules in 1 group at the anterior end; a bivalve shell, the plane of junction of whose valve is parallel to the longitudinal plane; an iodinophile vacuole; type (and only) genus, *Myxobolus* Bütschli.

MYXOBOLUS Bütschli, 1882.

Bronn's Thier-Reich, I, t. 38, f. 6–10; *Myxosporidium* § Perugia, 1891, Boll. Scientif. Pavia, XIII, p. 23; *Myxobolus* et *Myxosporidium* Weltner, 1892, Sitzsber. d. Gesellsch. Naturf. Freunde Berlin, pp. 34–35; *Myxobolus* et *Henneguya*|| Thélohan, 1892, Bull. Soc. philomat. Paris, IV, pp. 176, 177.

Definition: Characters those of the family; type *M. mülleri* Bütschli.

* *Sporoplasm.* Protoplasm of the spore.

† I propose *Myxosporidium* Perugia (synonym for *Myxobolus* Bütschli) as the type genus of the Fam. *Myxosporidieæ* Perugia.

‡ Except species which have suffered reduction of characters (*Myxobolus unicapsulatus* sp. nov., *M. piriformis* Thél.).

§ I propose *M. merlucii* Per. as the type species of this genus.

|| I propose *H. psorospermica* Thél. as the generic type. No valid generic distinction seems possible between the untailed and the tailed forms, for which latter Thélohan proposed *Henneguya*. Apart from the absence or presence of a tail (both of which conditions may, according to good observers, occur in the same species; cf. Weltner, Sitzsber. Ges. Naturf. Freunde Berlin, 1892, pp. 28–36) the only character relied upon for their separation is the constancy of 2 capsules in the tailed forms, but this is also the typical number for *Myxobolus* and the presence of two exceptional species does not militate against the rule.

Myxobolus unicapsulatus sp. nov.(Psorosperm of *Labeo niloticus* Müller, Müller's Archiv., 1841, p. 487, t. 16, f. 5 a-d.)

Spore: Of the form and size of *Chloromyxum dujardini* Thél.; capsule only 1, obliquely directed.

Habitat: *Labeo niloticus*, from the Nile.

Myxobolus piriformis Thélohan, 1892.

Bull. Soc. philomat. Paris, IV, p. 177.

Myxobolus inequalis sp. nov.(Psorosperms of *Pimelodus blochii* (Valenc.) Müller, Müller's Archiv., 1841, p. 487, t. 16, f. 6 a, b.)

Spore: Length 11 μ ; breadth, 7 μ ; capsules 2 of unequal size.

Habitat: On *Pimelodus clarias* Bloch (= *Silurus clarias* Valenc.), from Guiana and Surinam.

Myxobolus mugilis Perugia, 1891.(Myxosporidium *mugilis*, Boll. Scientif. Pavia, XIII, pp. 23-4; *Myxobolus mugilis* Thélohan, 1892, Bull. Soc. philomat. Paris, IV, p. 166.)**Myxobolus oviformis** Thélohan, 1892.

Bull. Soc. philomat. Paris, IV, p. 177.

Myxobolus mülleri Bütschli, 1882.

Bronn's Thier-Reich, I, t. 38, f. 6-10.

Myxobolus oblongus sp. nov.(Psorosperms of *Catostomus tuberculatus* Müller, Müller's Archiv., 1841, pp. 487-90, t. 16, f. 7-9.)

Cyst: Round or elliptic, 1 mm. or less.

Spore: Spatular or round-oblong; length, 14 to 17 μ ; greatest breadth and greatest thickness at about the junction of the anterior and second fourth of the length; breadth, 8.5 μ ; thickness, 5 to 6 μ ; width of ridge nearly equal to one-third of thickness; capsules, 2; nuclei 2, and perhaps* more; vacuole not seen.

Habitat: Subcutaneous on head of *Erimyzon sucetta* Lac. (= *Catostomus tuberculatus* Le Sueur).

Myxobolus ellipsoïdes Thélohan, 1892.

Bull. Soc. philomat. Paris, IV, p. 177.

Myxobolus bicostatus sp. nov.(Myxosporidian spore of branchiae of *Tinca vulgaris* Bütschli, 1882; Bronn's Thier-Reich, I, t. 38, f. 19.)

Spore: Shell with 2 oblique ribs over the longitudinal axes of the capsules; capsular index 0.50.†

Habitat: Branchiae of *Tinca tinca* L.

Myxobolus lintoni sp. nov.(Psorosperms of *Cyprinodon variegatus* Linton, 1891, Bull. U. S. Fish Com. for 1889, IX, pp. 99-102, t. 35, f. 1-16.)

Spore: Ovate; length, 13.9 μ ; breadth, 11 μ ; thickness about 8 μ ; shell, valves separating rapidly in sulphuric acid (cold, concentrated); capsules, 2, equal; filaments extruded under influence of sulphuric acid and of iodine water; nuclei ad plur. 4, 2 of which are the pericornual;‡ vacuole present.

* The condition of the material being such as not to exclude the possibility of sporoplasmodic degeneration, these results are not entirely decisive.

† Capsular index. The ratio of the length of the capsule to the antero-posterior diameter of the shell cavity.

‡ Pericornual nuclei. The 2 nuclei ("granules" "globules") situated at the antero-lateral angles (cornua) of the sporoplasm or on the posterior extremities of the capsules.

Habitat: Subcutaneous, on *Cyprinodon variegatus*, from the Atlantic at Woods Holl, Mass., August 20, 1889.

Myxobolus obesus, sp. nov.

(Psorosperm of the "Ablette," Balbiani, 1883, Journ de Microgr., VII, p. 203, fig. 43.)

Spore: Very broadly ovate.

Habitat: On *Alburnus alburnus* L.

Myxobolus cycloides, sp. nov.

(Psorosperms of *Cyprinus rutilus* (pars) Müller, Müller's Archiv., 1841, pp. 481, 486, t. 16, f. 4 d-g.)

Spore: Subcircular-ovate to broadly rounded-elliptic.

Habitat: Opercle and pseudobranchiæ of *Leuciscus rutilus* L., from German rivers, May and June.

Myxobolus sphaeralis sp. nov.

(Psorosperms of *Coregonus fera* Claparède, 1874, in Lunel's Hist. Nat. d. Poissons du bassin du Léman, Geneva, pp. 113-4.)

Spore: Untailed; perfectly spherical; diameter, 9μ ; containing a single spherical very strongly refringent "nucleus" [? vacuole].

Habitat: Cysts imbedded by thousands in the branchial mucosa of *Coregonus fera* Jur.

Myxobolus globosus, sp. nov.

Cyst: Elongate-elliptic or rod-shaped; length *ad max.*, 0.50 mm.

Spore: Globose; length, 7 or 8 μ ; breadth, 6 μ ; thickness, 5 μ ; ridge very wide, one-third of thickness; capsular index somewhat more than 0.50.

Habitat: Branchial lamellæ of *Erimyzon suetta* Lac. (= *Catostomus tuberculatus* Le Sueur), from Kinston, N. C., Columbia, S. C., and from the tributaries of the Fox River, Miss. (collections U. S. National Museum).

Myxobolus transovalis, sp. nov.

Spore: Transversely elliptic; length, usually 6, occasionally 7 μ ; breadth, 8 μ ; valves separating in sulphuric acid; ridge narrow; capsules 2, equal; capsular index, 0.50; filaments extruded under the influence of glycerine and of sulphuric acid; nuclei, 2, rarely only 1, pericornual nuclei apparently absent; vacuole probably present.

Habitat: In hollow of under surface of scales of *Phoxinus funduloides* from Four mile Run (tributary of Potomac River), Carlins, Va., June 29, 1892.

Myxobolus merlucii Perugia, 1891.

Myxosporidium merlucii, Boll. Scientif. Pavia, XIII, pp. 22, 24, f. 9-14.

Myxobolus perlatus, sp. nov.

(Psorosperms of *Acerina cernua* Balbiani, 1883, Journ. de Microgr. Paris, VII, pp. 201, 204, fig. 44.)

Spore: Wider than long.

Habitat: On *Gymnocephalus cernua* L.

Myxobolus?? zschokkei, sp. nov.*(Psorosperms of *Coregonus fera* Zschokke, 1884, Archiv. de Biol. v, pp. 234-5, t. 10, f. 16.)

Cyst: Oval, pea to nut size; multiple (up to 30).

Spore: Body lenticular or oval, a little wider in front than behind; often bearing in front a blunt prolongation; posteriorly one distinguishes two "tails" (*queues*) 6 to 8 times longer than the body, attenuating posteriorly, curved and undulating; the number of two "tails" is constant; at the pole opposite to the "tails" are 2 oval, transparent anteriorly converging vesicles; one sometimes sees, however, an extremely fine canal extending from the posterior end of each vesicle to the base of the corresponding "tail"; the vesicles then probably play here also the rôle of receptacles for the "tails"; round refractile globules are also seen at the bases of the vesicles; the remainder of the body is filled by a homogeneous plasmic mass which frequently contracts to the center of the body cavity, forming a clearly distinct round or oval mass.

Habitat: Subcutaneous and superficial intermuscular tissue of *Coregonus fera* Jur.; April and May.

Myxobolus brevis Thélohan, 1892.*Henneguya brevis*, Bull. Soc. philomat. Paris, iv, p. 177.**Myxobolus medius Thélohan, 1892.***Henneguya media* Bull. Soc. philomat. Paris, iv, p. 176.**Myxobolus monurus, sp. nov.**(Psorosperms of *Aphredoderus sayanus* Ryder, 1880, Amer. Nat. XIV, pp. 211-212, figs. 1, 2.)

Cyst: Lenticular, large, about 20 in number.

Spore: Tailed; body lenticular or slightly obovate; tail undivided, thick at origin, gradually attenuating, more or less curved, 2 to 3 times as long as body; capsules 2, equal, subparallel.

Habitat: Subcutaneous intermuscular tissue of *A. sayanus* from near Woodbury, N. J.

Myxobolus macrurus, sp. nov.

Cyst: 15 to 20 or more, the size of a pinhead.

Spore: Plainly dorso-ventrally asymmetric; tailed; body round-elliptic; 10 or 11 μ long; 6 to 8 μ broad; 4 μ thick. Shell insoluble in sulphuric acid (cold, concentrated); superior valve more convex than inferior; tail somewhat less transparent than shell, completely dissolved by cold concentrated sulphuric acid; almost or entirely invisible in balsam; length 30 to 40 μ , usually much less, the attenuate posterior portion being easily, and consequently frequently, broken off; tail separated entirely from shell by iodine water. Capsules 2, equal; nuclei *ad plur.* 4, 2 of them being the pericornual; vacuole present.

Habitat: Cysts invariably[†] embedded in the subcutaneous tissue of some part of the head (especially the under surface of the lower jaw) of *Hybognathus nuchalis* Ag., from the Neches River, 14 miles east of Palestine, Texas, November 24, 1891.

* Dedicated to Dr. F. Zschokke, of Basel.

[†] Among several hundred cysts, one was seen at the base of the pectoral fin, say 3 mm. behind the head.

Myxobolus strongylurus, sp. nov.(Psorosperms of *Synodontis schal*, Müller, Müller's Archiv., 1841, pp. 480-481, t. 16, f. 2.)

Spore: Body anteriorly blunter than in *M. schizurus*; length of body 9 μ ; breadth 5.4 μ ; tail single, undivided, very peculiar in being constantly oblique in the longitudinal plane.

Habitat: Encysted in skin of head of *S. schal* from the Nile.

Myxobolus kolesnikovi,* sp. nov.(Psorosperms of *Coregonus fera* Kolesnikoff, 1886, Veter. Vestnik Kharkoff., v, pp. 242-248, f. 1-3.)

Cysts: Numerous (up to 80), spherical or oval, 10 to 30 mm. long by 7 to 20 mm. broad.

Spore: Round or oval with a sharp anterior end; tail single or double, thick at its origin, attenuating gradually.

Habitat: Interstitial connective tissue of the thoracic muscles of *Coregonus fera* Jur.

Kolesnikoff's figures show the "double" tail to be merely the separated (laterally shifted) halves of the really single tail. To this species should probably be approximated one of Claparède's 3 forms, † viz, the tailed form habitant in the muscles of *C. fera*.

Myxobolus linearis, sp. nov.(Psorosperms of *Pimelodus sebae* and of *Platystoma fasciatum* Müller, Müller's Archiv., 1841, p. 489, t. 16, f. 10).

Spore: Body lanceolate-linear; length 3 to 4 times breadth; capsules 2, equal, entirely parallel-appressed; tail single, occasionally double.

Habitat: Cysts in membrane lining branchial cavity of *Rhamdia sebae* Cuv. & Val., and in branchial lamellæ of *Pseudoplatystoma fasciatum* L., both from South American rivers.

In cysts at the base of the dorsal fin of *Ameiurus melas* Raf., from Storm Lake, Iowa, a spore occurs which I strongly suspect to be identical with this species, as it answers in every respect to the above (rather meager) diagnosis. It is peculiarly interesting, as the tail is composed of a dorsal and a ventral half, and is insoluble in sulphuric acid (cf. *M. macrurus*).

Myxobolus schizurus, sp. nov.(Psorosperms of *Esox lucius* Müller, Müller's Archiv., 1841, pp. 477-478, t. 16, f. 1.)

Cyst: 0.44 to 1.09 mm. in diameter.

Spore: Body oval, length 12 μ ; breadth 6 μ ; thickness one-half the breadth; tail stout at origin, 3 to 4 times length of body, very frequently (probably as a rule) more or less bifurcate; capsules 2, equal, diverging posteriorly.

Habitat: In cellular tissue of the eye muscles, in that of the sclerotic, and in that between the sclerotic and choroid of *Esox lucius* in May and June. Müller failed to find it in North American pikes.

* Dedicated to N. F. Kolesnikoff, who first figured this form.

† Claparede in Lunel's Hist. Nat. d. Poissons du bassin du Léman, pp. 113.

Myxobolus creplini,* sp. nov.

(Psorosperms of *Acerina vulgaris* Creplin., 1842, Wieg. Archiv. f. Naturgesch., I, pp. 61-63, t. 1, f. 1 a-e; cf. Weltner, 1892, Sitzungs.-Ber. Ges. Naturf. Freunde Berlin, pp. 29-31, 34).

Spore: Body elongate ventricose-elliptic; length 17.3 μ ; breadth 5.8 μ ; tail simple, as long as or a little longer than the body; capsules 2, equal.

Habitat: On *Gymnocephalus cernua* L., collected March 14, 1837.

Weltner believes the form observed by him in the ovary of *Esox lucius* to be identical with this form. Weltner's species was sometimes tailed and sometimes untailed.

Myxobolus psorospermica Thélohan, 1892.

Henneguya psorospermica, Bull. Soc. philomat. Paris, IV, pp. 167, 176.

Myxobolus diplurus, sp. nov.

(Psorosperms of kidney of *Lota vulgaris* Bütschli, 1882, Bronn's Thier-Reich, I, t. 38, f. 21.)

Description (from figure).

Spore: Capsules 2, equal, posteriorly situated; tail double from base, the 2 halves adnate.

Habitat: Kidney of *Lota lota* L.

CHLOROMYXIDÆ fam. nov.

("Chloromyxées" et "Myxidiées" (pars) Thélohan, 1892, Bull. Soc. philomat. Paris, IV, pp. 173, 176.)

Definition: *Phænocystes* destitute of antero-posterior, but possessing bilateral, symmetry;† capsules in 1 group at the anterior end; a bivalve shell, the plane of junction of whose valves is perpendicular (?) to the longitudinal; no vacuole; type genus *Chloromyxum* Ming.

CHLOROMYXUM Mingazzini, 1890.

Bull. Soc. Nat. Napoli, IV, p. 160; ib., *Sphaerospora*, *Myxosoma* et *Mixosoma* ‡ Thélohan, 1892, Bull. Soc. philomat. Paris, IV, pp. 173, 175-6.

Definition: *Chloromyxidæ* with subspherical or ovate spores, whose breadth does not exceed their length; valves hemispherical; sporoplasm bilaterally and symmetrically situated; type *C. leydigii*.

CHLOROMYXUM sens. strict.

Definition: Quadricapsulate Chloromyxa; type *C. leydigii*.

Chloromyxum fluviatile Thélohan, 1892.

Bull. Soc. philomat. Paris, IV, pp. 173, 176, fig. 2.

* Dedicated to the discoverer, J. C. L. Creplin.

† Imperfect from unilateral position of sporoplasm in *Ceratomyxa*.

‡ See subgenus *Sphaerospora*, p. 419. The table on p. 411 shows that *Sphaerospora* and *Mixosoma* differ from *Chloromyxum* by only a single character, viz: the number of the capsules. As shown on p. 411, this character is a subordinate one compared to the grouping and position of the capsules, in which latter all the three genera agree. They may, therefore, all be grouped under one genus.

The two unispecific genera *Sphaerospora* and *Mixosoma* have (at least as far as the record now shows) absolutely no distinctive character but the shape of the spore. They are therefore fused. Provisionally (but with some hesitation) I have recognized *Sphaerospora* (including *Mixosoma*) as a subgenus. Its sole claim to such distinction rests on 2 capsules as against 4 in *Chloromyxum* proper. It is also worthy of note that the possibility of transitions are by this definition arbitrarily excluded, inasmuch as all our experience shows that increase of capsule number is by duplication and not by addition. So that the possibility of its ultimate entire fusion with *Chloromyxum* seems by no means remote.

Chloromyxum mucronatum* sp. nov.**(Psorosperms of *Gadus lota* Lieberkühn, Müller's Archiv., 1854, pp. 352-3, 368, t. 14, f. 5, 6.)Myxosporidium: Measuring 75 μ or less; spherical or ellipsoidal, rarely irregular.Spore: Broadly rounded-oval; concave pointed anteriorly; length *ad max.*, 8 μ .Habitat: Free in urinary bladder of *Lota lota* L.Chloromyxum leydigii* Mingaz., 1890.**

Boll. Soc. Nat. Napoli., iv, pp. 160-4 (see also the next species).

***Chloromyxum incisum* sp. nov.**(Psorosperms of *Raja batis* Leydig, Müller's Archiv., 1851, pp. 225-226, 234, t. 8, f. 4a-f.)Myxosporidium: Biliary yellow, roundish or somewhat elongate, 29 to 88 μ in diameter, without or with 1 to 4 pansporoblasts.Spore: Sharply cuneate-oval, *posterior border radiate-incised*, resembling a radiate-ribbed Lamellibranch shell.Habitat: Free in gall-bladder of *Raja batis* L.

In face of the striking difference between this spore-form and *C. leydigii*, the present evidence (which consists of Mingazzini's opinion* without any detailed evidence, Perugia's opinion,† too little explicit, and the probably not independent opinion of Thélohan ‡) is insufficient to warrant the fusion of the two forms, especially as it does not appear that either Mingazzini or Perugia examined the gall-bladder of *Raja batis*.

Chloromyxum* ?? *congri* Perugia, 1891.Myxosporidium congri*, Boll. Scientif. Pavia, XIII, pp. 24-5, f. 15-20.Habitat: Gall-bladder of *Leptocephalus conger* collected in August, 1890.

Subgenus SPHÆROSPORA Thélohan, 1892.

Bull. Soc. philomat. Paris, iv, p. 175; *Mixosoma* § et *Myxosoma* *ibid.*, p. 175.Definition: Bicapsulate Chloromyxa; type *Chloromyxum* (*S.*) *elegans* Thél.***Chloromyxum elegans* Thélohan, 1892.***Sphaerospora elegans*, Bull. Soc. philomat. Paris, iv, pp. 167, 175.***Chloromyxum dujardini* Thélohan, 1892.**(Psorosperms of *Cyprinus rutilus* (*paris*) Müller, Müller's Archiv., 1841, pp. 481, 486, t. 16, f. 4 b, c; psorosperm of *Cyprinus erythrophthalmus* Dujardin, 1845, Hist. Nat. des Helminthes, p. 644, t. 12, f. 12 N₁, 12 N₂.)*Mixosoma dujardini*, Bull. Soc. philomat. Paris, iv, p. 175.

Myxosporidium: 1.25 to 1.50 mm. long.

Spore: Ovate, pointed anteriorly, broadly rounded posteriorly; length 10 to 12 μ ; capsules 2, of equal size.Habitat: Branchial lamellæ of *Leuciscus* (*Scardinius*) *erythrophthalmus* from the Vilaine, at Rennes, France; pseudobranchiæ of *Leuciscus rutilus*, from German rivers.

Concerning the form observed by him, Müller says:

Once there was found on the pseudobranchiæ (*Nebenkiemen*) a mass of small yellow cysts. The size of this mass was 4 lines. This time all the cysts contained elongate capsules with pointed anterior and bluntly rounded posterior ends (f. 4 b). On the flat border the convex surfaces were exactly equal and the two diverging vesicles were attached interiorly at their points.

* Boll. Soc. Nat. Napoli, 1890, iv, pp. 160-161.

† Boll. Scientif. Pavia, 1890, XII, p. 138.

‡ Bull. Soc. philomat. Paris, 1892, iv, p. 176.

§ Type *Chloromyxum* (*Mixosoma*) *dujardini*.

Thus this form was never found coexisting in the same cyst with *Myxobolus cycloides* sp. nov. Considering the great frequency of occurrence of the latter species such coexistence would be expected if they were merely different forms of one species. Their persistent non-association thus strongly reenforces the argument in favor of their specific distinctness, drawn from their different characters.

The synonymy is on the authority of Thélohan (letter to the author, 1893). He has found *Mixosoma dujardini* upon both of the fishes named above and believes that Müller's and Dujardin's figures represent the same species.

CERATOMYXA Thélohan, 1892.

Bull. Soc. philomat. Paris, IV, pp. 169, 175.

Definition (provisional): *Chloromyxidæ* with bilaterally symmetrical, transversely extended, sub-isosceles-triangular spores, whose breadth greatly exceeds the length; valves hollow-conical with solid tips; sporoplasm unilaterally and asymmetrically situated; type *C. sphærulosa* Thél.

Ceratomyxa sphærulosa Thélohan, 1892.

Bull. Soc. philomat. Paris, IV, pp. 171-3, 175, fig. 1.

MYXIDIIDÆ fam. nov.

("Myxidiées" (pars) Thélohan, 1892, Bull. Soc. philomat. Paris, IV, pp. 173, 175.)

Definition (provisional, as regards negative characters): *Phænocytes* destitute of antero-posterior, but possessing bilateral symmetry; capsules in 2 groups in the (right and left) wings; no bivalve shell; no vacuole; type (and only) genus *Myxidium* Bütschli.

MYXIDIUM Bütschli, 1882.

Bronn's Thier-Reich, I, t. 38.

Definition: Characters those of the family; type *M. lieberkühnii* Bütschli.

Myxidium lieberkühnii Bütschli, 1882.

Bronn's Thier-Reich, I, t. 38, f. 12-15.

Probably a second species is Leydig's "psorosperm" of the bile-ducts of *Raja batis*, Müller's Archiv, 1851, pp. 226, 234, t. 8, f. 4g.

INDEX.

Lobsters, planted in Galveston Bay	97	1. Value of fish and other products taken with each principal form of apparatus used in Gulf fisheries in 1890	96
Louisiana, fisheries of	155-171	2. Rigs of vessels employed in fisheries of Gulf region in 1890	97
Mississippi, fisheries of	145-154	3. Number of persons engaged in fisheries of Gulf States in 1890	104
Names of fishes, mollusks, etc	99-102		
Oyster canning	136, 154, 169		
Oyster trade	135, 136, 144, 154, 171, 184		
Pound-net fishing, obstacles to	95		
Race, Edward E	95		

REPORT ON THE FISHERIES OF THE GULF STATES—Continued.

Page.		Page.	
Tabular statements—Continued.			
4. Nationality of persons engaged in fisheries of Gulf States in 1890	104	34. Showing by counties the apparatus and capital employed in Alabama fisheries in 1889 and 1890	141
5. Investment in fisheries of Gulf States in 1890	104	35. Showing by counties and species the yield of Alabama fisheries in 1889 and 1890	141
6. Products of fisheries of Gulf States in 1890	104-105	36. Showing by counties the yield of Alabama vessel fisheries in 1889 and 1890	142
7. Percentage of quantity and value of each species taken in fisheries of Gulf States in 1890	106	37. Showing by counties and species the yield of Alabama shore fisheries in 1889 and 1890	142
8. Comparative table showing extent of fisheries of Gulf States in 1880 and 1890	106	38. Showing by counties and apparatus the yield of Alabama shore fisheries in 1889 and 1890	143
9. Comparative table showing by States the oyster yield of Gulf States in 1880 and 1890	108	39. Wholesale oyster trade of Alabama in 1889 and 1890	144
10. Persons employed in fisheries of west coast of Florida	109	40. Wholesale fish trade of Alabama in 1889 and 1890	144
11. Nationality of persons engaged in fisheries of west coast of Florida	110	41. Persons employed in Mississippi fisheries	146
12. Apparatus and capital employed in fisheries of west coast of Florida	110	42. Nationality of persons employed in Mississippi fisheries	146
13. Products of fisheries of west coast of Florida	111	43. Apparatus and capital employed in Mississippi fisheries	146
14. Showing by counties the number of persons employed in fisheries of west coast of Florida in 1889 and 1890	112	44. Products of Mississippi fisheries	147
15. Showing by counties the apparatus and capital employed in fisheries of west coast of Florida in 1889 and 1890	113-115	45. Showing by counties the number of persons employed in Mississippi fisheries in 1889 and 1890	147
16. Showing by counties and species the yield of fisheries of west coast of Florida in 1889 and 1890	116-118	46. Showing by counties the number and value of vessels, boats, apparatus, etc., employed in Mississippi fisheries in 1889 and 1890	148
17. Showing by counties and species the yield of vessel fisheries of west coast of Florida in 1889 and 1890	119-120	47. Showing by counties the yield of Mississippi fisheries in 1889 and 1890	149
18. Showing by counties and species the yield of shore fisheries of west coast of Florida in 1889 and 1890	121-123	48. Showing by species and counties the yield of Mississippi vessel fisheries in 1889 and 1890	150
19. Summary by customs districts of vessel fisheries of west coast of Florida in 1889 and 1890	124	49. Showing by counties and species the yield of Mississippi shore fisheries in 1889 and 1890	151
20. Showing by customs districts and species the yield of vessel fisheries of west coast of Florida in 1889 and 1890	125	50. Showing by apparatus and species the yield of Mississippi shore fisheries in 1889 and 1890	152-153
21. Showing by counties and apparatus the yield of vessel fisheries of west coast of Florida in 1889 and 1890	126-128	51. Canning industry of Mississippi	154
22. Showing by counties and apparatus the yield of shore fisheries of west coast of Florida in 1889 and 1890	128-134	52. Showing by counties the wholesale oyster packing trade of Mississippi in 1889 and 1890	154
23. Wholesale fish trade of west coast of Florida in 1889 and 1890	135	53. Wholesale fish trade of Mississippi in 1889 and 1890	154
24. Wholesale oyster trade of west coast of Florida in 1889 and 1890	136	54. Persons employed in Louisiana fisheries	156
25. Oyster-canning industry of west coast of Florida in 1889 and 1890	136	55. Showing the nationality of persons engaged in Louisiana fisheries in 1889 and 1890	156
26. Wholesale green-turtle trade of west coast of Florida in 1889 and 1890	136	56. Apparatus and capital employed in Louisiana fisheries	157
27. Wholesale sponge trade of west coast of Florida in 1889 and 1890	137	57. Products of Louisiana fisheries	157
28. Wholesale alligator trade of west coast of Florida in 1889 and 1890	138	58. Showing by parishes the number of persons employed in Louisiana fisheries in 1889 and 1890	158
29. Persons employed in Alabama fisheries	139	59. Showing by parishes the apparatus and capital employed in Louisiana fisheries in 1889 and 1890	158-160
30. Nationality of persons engaged in Alabama fisheries	139	60. Showing by parishes and species the yield of Louisiana fisheries in 1889 and 1890	160-162
31. Apparatus and capital employed in Alabama fisheries	139	61. Showing by parishes and species the yield of Louisiana vessel fisheries in 1889 and 1890	163
32. Products of Alabama fisheries	140	62. Showing by parishes and species the yield of Louisiana shore fisheries in 1889 and 1890	163-165
33. Showing by counties the number of persons employed in Alabama fisheries in 1889 and 1890	140	63. Showing by parishes and apparatus the yield of Louisiana vessel fisheries in 1889 and 1890	166-167
		64. Showing by parishes and apparatus the yield of Louisiana shore fisheries in 1889 and 1890	167-170
		65. Wholesale oyster trade and the canning of oysters and shrimp in Louisiana in 1889 and 1890	171
		66. Wholesale fresh-fish and shrimp trades of Louisiana in 1889 and 1890	171
		67. Persons employed in Texas fisheries	173

REPORT ON THE FISHERIES OF THE GULF STATES—Continued.

	Page.		Page.
Tabular statements—Continued.		Tabular statements—Continued.	
68. Nationality of persons engaged in the fisheries of Texas	173	74. Showing by counties and species the yield of Texas vessel fisheries in 1889 and 1890	178
69. Apparatus and capital employed in Texas fisheries	173	75. Showing by counties and species the yield of Texas shore fisheries in 1889 and 1890	179–180
70. Products of Texas fisheries	174	76. Showing by counties and apparatus the yield of Texas shore fisheries in 1889 and 1890	181–184
71. Showing by counties the number of persons employed in Texas fisheries in 1889 and 1890	174	77. Wholesale oyster and fish trades and turtle canning of Texas in 1889 and 1890	184
72. Showing by counties the apparatus and capital employed in Texas fisheries in 1889 and 1890	175	Texas, fisheries of	170, 184
73. Showing by counties and species the yield of Texas fisheries in 1889 and 1890	176–177	Turtle, canning	184
		Turtle trade	136
		Vessels, rigs of, represented in Gulf fisheries	96, 97

REPORT ON A COLLECTION OF FISHES FROM THE ALBEMARLE REGION OF NORTH CAROLINA.

Albemarle Sound	186	Genera and species referred to—Continued.	
Common names of fishes of the Albemarle region, list of	188	Lucius reticulatus	191, 195, 199
Davis Bay	189	Menidia beryllina	192, 195
Economic fishes taken in 1890, tabular statement of	186	Micropterus salmoides	192, 196, 200
Edenton	193	Morone americana	192, 196, 200
Edenton Bay	193–196	Moxostoma anisurum	198
Elizabeth City	189	crassilabre	194, 198
Genera and species referred to:		Myriophyllum	193, 196
Achirus fasciatus	196	Notemigonus chryssoleucus	191, 195, 199
Acipenser sturio oxyrhynchus	190, 193, 198	Notropis hudsonius	190, 194
Amia calva	190, 193, 198	niveus	194
Ameiurus albidus	190, 193, 198	whipplei	194
nebulosus	190, 194, 198	Palæmonetes exilipes	189, 193
Ælurichthys marinus	194	Paralichthys lethostigma	196, 200
Anguilla chrysypa	191, 195, 199	Perca flavescens	192, 196, 200
Aphredoderus sayanus	199	Pomoxis sparoides	192, 196, 199
Brevoortia tyrannus	191, 195	Querimana gyrans	192, 195, 199
Cambarus blandus	193	Roccus lineatus	192, 196, 200
acuta	197	Semotilus atromaculatus	199
Centrarchidæ	197	Stizostedion vitreum	192, 196, 200
Centrarchus macropterus	199, 200	Tylosurus marinus	191, 195
Chænobryttus gulosus	196, 199, 200	Introductory note	185–187
Clupea æstivalis	191, 195, 199	Pasquotank River	189–192
mediocris	195, 199	Persons referred to or quoted:	
pseudoharengus	191, 195, 199	Evermann, Barton W	194
sapidissima	191, 195, 199	Gilbert, Charles H	194
Cyprinus carpio	190, 199	Jordan, David Starr	185, 187, 192, 194, 198
Dorosoma cepedianum	191, 195, 199	Kendall, W. C	192
Enneacanthus obesus	199	Leary, J. L	194, 195
simulans	196	Rathbun, Richard	185
Erimyzon sucetta	194	Skinner, H. G	195
Etheostoma nigrum olmstedi	192, 196, 200	Worth, S. G	198, 199, 200
Fundulus diaphanus	191, 195, 199	Waters, George	190
Gambusia patruelis	191, 193, 195, 199	Plymouth and vicinity	197
Hybognathus nuchalis	190, 194, 199	Reedy Point	193
Lepomis auritus	196	Roanoke River	197–200
gibbosus	192, 196, 200	Specific names of fishes of the Albemarle region, list of	187
pallidus	196, 200	Tabular statement of economic fishes taken in 1890	186
Lucius americanus	195, 199	Weldon	197

OBSERVATIONS ON THE SPAWNING HABITS OF THE SHAD.

Albemarle production	206	Movements of shad controlled by temperature	205
Chapman Point	204	Potency of creeks	205
Daily average temperature, influence of	206	Potomac River production	203
Delaware River production	204, 205	Shad-egg production of the Potomac River, 1888–1891	204
Ferry Landing	204	Shad ova on Potomac River, cost of	201
Fort Washington seine production for 1887 and 1888	205	Spawning region of the shad	201
Fort Washington seine, record of operations, 1887–1891	202	Stony Point	203
Inequalities in production	202	Sutton Beach fishery	203

AQUATIC INVERTEBRATE FAUNA OF THE YELLOWSTONE NATIONAL PARK, WYOMING,
AND THE FLATHEAD REGION OF MONTANA.

NOTES ON A COLLECTION OF FISHES FROM THE SOUTHERN TRIBUTARIES OF THE CUMBERLAND RIVER IN KENTUCKY AND TENNESSEE.

Beaver Creek	266	Species enumerated in lists—Continued.	
Big South Fork of the Cumberland River.....	266–268	<i>Chrosomus erythrogaster</i>	263, 266
Brimstone Creek.....	267	<i>Catostomus nigricans</i>	260, 262, 263, 264, 265, 266, 267
Canada Creek.....	267	<i>teres</i>	326
Caney Fork River.....	262	<i>Clupea chrysocloris</i>	264, 265
Cumberland River.....	265	<i>Cottus bairdi</i>	261, 263, 265, 268
Eagle Creek.....	263	<i>Etheostoma aspro</i>	262, 265, 268
Little South Fork of the Cumberland River.....	266	<i>blennioides</i>	260, 261, 262, 263, 264, 266, 268
New River.....	267	<i>camurum</i>	268
Obeys River.....	263–265	<i>caprodes</i>	260, 261, 262, 264, 265, 266, 268
Otter Creek.....	266	<i>cinereum</i>	264, 268
Roaring River.....	263	<i>cœruleum</i>	263, 265, 266, 268
Rock Creek.....	267	<i>copelandi</i>	265
Round Lick Creek.....	261	<i>evides</i>	262, 264
Species enumerated in lists:		<i>macrocephalum</i>	264, 268
<i>Ambloplites rupestris</i>	262, 263, 264, 268	<i>obeyense</i>	265, 266, 268
<i>Amblystoma punctatum</i>	268	<i>rufolineatum</i>	260, 261, 262, 264, 268
<i>Ameiurus natalis</i>	260, 261	<i>simoterum atripinnis</i> ..	260, 261, 262, 264, 268
<i>nebulosus</i>	264, 266	<i>squamiceps</i>	260, 261
<i>Aplodinotus grunniens</i>	262, 265	<i>stigmæum</i>	262, 265, 268
<i>Campostoma anomalum</i> ..	260, 261, 262, 263, 264, 265, 266, 267	<i>zonale</i>	265

NOTES ON FISHES FROM THE SOUTHERN TRIBUTARIES OF THE CUMBERLAND RIVER—Continued.

<i>atherinoides</i>	261, 262, 264, 265, 267	<i>Wolf River</i>	263

REPORT ON THE FISHERIES OF THE SOUTH ATLANTIC STATES.

Alewife fishery	274, 355	North Carolina fisheries, by counties	287-295
Alligator industry	335, 343-345	importance of	284
Apparatus in South Atlantic fisheries	274-275, 277, 278, 295-304, 314-317, 326-330, 339-343, 350-353	fishing-grounds	282
Character of fisheries	274-275, 308-309, 334	fish trade	305, 306
Comparisons between 1880 and 1890	279-281	general statistics	285-286
Fishery resources	272	geography of coast	228
Fishing-grounds	282-284, 307-308, 319, 333-334	importance of fisheries	284
Fish trade	305, 306, 331-332	menhaden industry	305, 306
Florida alligator industry	335, 343-345	oyster canning	305, 306
description of coast and rivers	333-334	industry	305, 306
fisheries	333-345	packing	305, 306
by apparatus	339-343	trade	305, 306
counties	336-338	porpoise industry	305, 306
general statistics	335, 336	rank as fishing State	285
importance of fisheries	334	shore fishing industries	305-306
increase of fisheries	334	Oyster canning	305, 306, 318, 320, 332, 345
nature of fisheries	334	fishery	274, 287, 318, 320
oyster canning	345	investigations	320
shore industries	345	packing	305, 306
Fresh-water fisheries	278, 320, 346-355	planting	318, 320
Geography of region	271, 282, 307, 319, 333-334	surveys	284, 320
Georgia fisheries	319-332	trade	305, 306, 318, 332, 345
by apparatus	326-330	Persons referred to or quoted—	
counties	322-326	Abbott, W. H.	270
development of	319-321	Drake, James C.	320
importance of	319-321	Earll, R. Edward	271, 334
fishing-grounds	319	Hall, Ansley	270
general statistics	321-322	McDonald, Marshall	271
oyster canning	332	Race, E. E.	270
cultivation	320	Ravenel, W. de C.	270, 318
investigations	320	Smith, Hugh M.	269
surveys	320	Stevenson, Charles H.	270
trade	331, 332	Winslow, Francis	284
shore industries	331-332	Worth, S. G.	270
Importance of South Atlantic fisheries	274-275, 284, 308-309 319-321, 334	Porpoise fishery	274, 305
List of fishes figured	356	industry	305, 306
Menhaden industry	305, 306	River basins, fisheries of	346-355
North Carolina fisheries	282-306	Salt-water fisheries	278, 320, 346
by apparatus	295-305	Shad fishery	274, 287, 295, 353-354
Shore fishing industries	305-306, 331-332, 345	Shore fishing industries	305-306, 331-332, 345

REPORT ON THE FISHERIES OF THE SOUTH ATLANTIC STATES—Continued.

	Page.		Page.
South Carolina fisheries.....	307-318	Tabular statements--Continued.	
by apparatus	314-317	27. Showing by counties the apparatus and capital employed in South Carolina fisheries in 1889 and 1890.....	311-312
counties.....	310-313	28. Showing by counties and species the yield of South Carolina fisheries in 1889 and 1890	312-313
general statistics.....	309-310	29. Showing by counties, apparatus, and species the yield of South Carolina shore fisheries in 1889 and 1890	314-317
oyster canning.....	318	30. Oyster-canning industry of South Carolina in 1890	318
planting.....	318	31. Persons employed in Georgia fisheries in 1889 and 1890	321
Sturgeon fishery.....	279, 355	32. Apparatus and capital employed in Georgia fisheries in 1889 and 1890	322
Tabular statements:		33. Products of Georgia fisheries in 1889 and 1890	322
1. Persons employed in fisheries of South Atlantic States in 1890.....	276	34. Showing by counties the number of persons em- ployed in Georgia fisheries in 1889 and 1890..	323
2. Vessels, boats, apparatus, shore property, and cash capital employed in fisheries of South At- lantic States in 1890	276	35. Showing by counties the apparatus and capital used in Georgia fisheries in 1889 and 1890....	323-324
3. Products of fisheries of South Atlantic States in 1890.....	277	36. Showing by counties and species the yield of Georgia fisheries in 1889 and 1890.....	325-326
4. Products, by apparatus, of fisheries of South At- lantic States in 1890.....	277	37. Showing by apparatus the yield of Georgia ves- sel fisheries in 1889 and 1890.....	326
5. Values of different fisheries of South Atlantic States in 1890.....	278	38. Showing by counties, apparatus, and species the yield of Georgia shore fisheries in 1889 and 1890.....	327-330
6. Value of the salt-water and fresh-water fisheries of South Atlantic States in 1890	278	39. Wholesale fish trade of Chatham County, Georgia, in 1890	331
7. Comparative statement of number of persons engaged in fisheries of South Atlantic States in 1880 and 1890.....	280	40. Retail fish trade of Savannah, Ga., in 1890.....	332
8. Comparative statement of vessels, boats, appa- ratus, and property employed in fisheries of South Atlantic States in 1880 and 1890.....	280	41. Oyster-canning industry of Georgia in 1889 and 1890	332
9. Comparative statement of values of principal products of fisheries of South Atlantic States in 1880 and 1890.....	281	42. Persons employed in fisheries of eastern Florida in 1889 and 1890.....	335
10. Persons employed in North Carolina fisheries in 1889 and 1890.....	286	43. Apparatus and capital employed in fisheries of eastern Florida in 1889 and 1890	335
11. Apparatus and capital employed in North Car- olina fisheries in 1889 and 1890.....	286	44. Products of fisheries of eastern Florida in 1889 and 1890.....	336
12. Products of North Carolina fisheries in 1889 and 1890	286	45. Showing by counties the number of persons em- ployed in fisheries of eastern Florida in 1889 and 1890.....	336
13. Showing by counties the persons employed in North Carolina fisheries in 1889 and 1890	288	46. Showing by counties the apparatus and capital employed in fisheries of eastern Florida in 1889 and 1890	337
14. Showing by counties the apparatus and capital employed in North Carolina fisheries in 1889 and 1890	288-290	47. Showing by counties and species the yield of fisheries of eastern Florida in 1889 and 1890	338
15. Showing by counties the yield of North Caro- lina shore fisheries in 1889 and 1890.....	291-294	48. Showing by counties, apparatus, and species the yield of fisheries of eastern Florida in 1889 and 1890	339-343
16. Showing by counties and species the yield of North Carolina vessel fisheries in 1889 and 1890	295	49. Oyster-canning industry of Florida in 1889 and 1890	345
17. Number of shad taken in each county in North Carolina in 1889 and 1890	295	50. Showing by river basins the number of persons employed in fresh-water fisheries of South Atlantic States in 1889 and 1890.....	347
18. Showing by counties, apparatus, and species the yield of North Carolina shore fisheries in 1889 and 1890	297-304	51. Showing by river basins the vessels, boats, apparatus, etc., employed in fresh-water fisheries of South Atlantic States in 1889 and 1890	347-348
19. Porpoise industry of North Carolina in 1889 and 1890	306	52. Showing by river basins the products of fresh- water fisheries of South Atlantic States in 1889 and 1890.....	348-349
20. Menhaden industry of North Carolina in 1889 and 1890.....	306	53. Showing by river basins and apparatus the products of fresh-water fisheries of South At- lantic States in 1889 and 1890.....	350-353
21. Wholesale fish trade of North Carolina in 1889 and 1890	306	Vessel fisheries.....	274, 295
22. Oyster industry of North Carolina in 1889 and 1890	306	unimportance of	274, 287
23. Persons employed in South Carolina fisheries in 1889 and 1890.....	309		
24. Apparatus and capital employed in South Caro- lina fisheries in 1889 and 1890.....	309		
25. Products of South Carolina fisheries in 1889 and 1890	310		
26. Showing by counties the persons employed in South Carolina fisheries in 1889 and 1890.....	310		

REPORT ON THE EUROPEAN METHODS OF OYSTER-CULTURE.
